

Evolution Children's Book

Abstract

During this project, we were asked to create a children's book discussing the evolution of our animal of choice. This project allowed us to use Analyzing the interconnectedness of biological systems through the Theory of Evolution because we were asked to understand the evolution of our creatures and what would biologically cause these things. We also used Communicating within a scientific framework because we took the information that we gathered than had to display it in a way so that a young child could understand what was occurring in the story while still being able to grasp the scientific concepts.

Reflection

During this project, I learned about natural selection and how different breeds of animals are created and have evolutionary changes that make each species unique. I used a few learning strategies during this project, one was dual coding because we had to take the information we had researched and wrote about in a story and change it into an illustration. We also used elaboration by taking the information that was scientific then changing it into a story with a plot and characters. If I could do this project again, I would have used pen and paper to draw my illustrations because drawing digitally became very complex.
