

Abstract

During this assignment, we took a sliver of the food web and created a food chain for our ecosystem using stop motion animation. We used Developing and Using Models when we took the information from the food web broke it down and created a model that showed the process in a clearer, faster, more concise way. The second domain that was used is Analyzing Data and Computational Thinking because we had to show our information in a visual format that could clearly show our work.

Reflection

I learned about the transmission of energy during this assignment and the process that keeps the energy cycle going. We used retrieval practice during this project when we had to take the information from an earlier project then apply it. We also used elaboration when we took the information from the earlier project then created something completely different and new with it. If I could do this assignment again I would take more pictures in between to create an even.

I didn't make any edits to this project.
