

Food Web

Abstract

During this assignment, we had to create a food web for an ecosystem that we picked. We used domains like Developing and Using Models when we had to create a digital foodweb on google slides, using original pictures with text. We also used Communicating within a scientific framework because we had to use the information we had learned and label the positions of these animals on our web.

Reflection

I learned about the food web of the Russian and Scandanavian Taiga during this project. While learning about this ecosystem I used dual coding by connecting the positions of consumers to animals. The second learning strategy I used was elaboration because we needed to make sure our web and animals in it were correct meaning we had to dig deep to find the information. If I could do this assignment again I would remember to make citations on our information.

I made one major correction to this artifact, I added endnotes that connected to the citations.
